U.S. Patent and Trademark Office PTOL-326 (Rev. 7-05)	Office Action Summ		rt of Paper No./Mail D	ate 20050929			

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:

- Claims 1, 2 and 4, drawn to a squeeze casting method, classified in class 164, subclass 120.
- II. Claims 3 and 5, drawn to a powder metallurgy method, classified in class 419, subclass 38.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions are the two distinct methods of molding metals.

- 2. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.
- 3. During a telephone conversation with Mr. Webb on 9/27/05 a provisional election was made with traverse to prosecute the invention of I, claims 1, 2 and 4. Affirmation of this election must be made by applicant in replying to this Office action. Claims 3 and 5 are withdrawn from further consideration by the examiner, 37 CFR 1.142(b), as being drawn to a non-elected invention.

Application/Control Number: 10/647,562

Art Unit: 1742

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) and the Intellectual Property and High Technology Technical Amendments Act of 2002 do not apply when the reference is a U.S. patent resulting directly or indirectly from an international application filed before November 29, 2000. Therefore, the prior art date of the reference is determined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

5. Claims 1 and 2 are rejected under 35 U.S.C. 102(e) as being anticipated by Withers et al.

Withers et al. discloses a method of forming a golf club component comprising:

providing an aluminum material to a mold;

heating the aluminum material to form a moldable mass;

squeeze casting by applying force with a ram; and

applying a finishing treatment to form the golf club component.

6. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

Application/Control Number: 10/647,562

Art Unit: 1742

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

7. Claim 4 is rejected under 35 U.S.C. 103(a) as being unpatentable over Withers et al. in view of Newkirk et al.

Withers et al. discloses the invention substantially as claimed (see paragraph 5 above). However, Withers et al. does not disclose wherein titanium and magnesium are used with aluminum to form the composite structure.

Newkirk et al. teaches to use titanium and magnesium in forming golf club components, and particularly teaches to use titanium for contact surfaces.

It would have been obvious to use titanium and magnesium as taught by Newkirk et al. in the aluminum base component of Withers et al. in order to form a golf club component with hard and strong contact components.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Daniel J. Jenkins whose telephone number is 571-272-1242. The examiner can normally be reached on M-TH6:30AM-5:00PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Roy King can be reached on 571-272-1242. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Art Unit: 1742

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
